ACKNOWLEDGEMENTS

A 2017 grant from the Institute for Museum and Library Services (MN00-17-0017-17), awarded to Koniag, Inc., provided financial support for this project. We thank Koniag, Inc. for working with us on the proposal and for helping to administer the grant funds. The IMLS staff was also very helpful, guiding us through grant administration and providing a critical project extension when the global pandemic limited access to Alutiiq culture bearers, the museum, and the collections that informed this manual. We thank them most sincerely.

This project was originally designed with assistance from former Alutiiq Museum Curator of Collections Marnie Leist, whose work with the Karluk One (KAR-001) and Old Karluk (KAR-031) assemblages helped to define many Alutiiq tool types and created images used in this manual in partnership with Sven Haakanson Jr. Kodiak photographer Pam Foreman also took a set of beautiful artifact photos for a related project that provided imagery for this manual. Alutiiq Elders kindly assisted in developing Alutiiq names for ancestral tools. Dehrich Chya led this effort with assistance from April Counciller. Elder Alutiiq Speakers Nick Alokli, Sally Carlough, Kathryn Chichenoff, Susan Malutin, Florence Pestrikoff, Sophie Shepherd and Ella Torgramsen kindly provided insights and recommendations. We thank them all for their contributions.

Geologist Tom Corbett was especially helpful in reviewing our system for inorganic raw material identification. He confirmed our approach and helped us refine our definitions. We are very grateful for his professional insights. Exhibits Manager Alex Painter created the raw material comparison kit that accompanies this manual, helped with data input and photography, and tested the draft manual. We appreciated her patient, skilled assistance.

Volunteers Margaret Greutert, Lynn Walker, and Dionisio Barboza III, Museum Assistant Wesley Pyle, and Exhibits Manager Alex Painter tested the manual. They worked with a selection of objects from the museum's teaching collection to identify object type and raw material using the manual as a guide. Their feedback was very helpful in fine-tuning the presentation. We thank them for their time, interest, and observations. Additionally, we shared a full draft of the manual with professional archaeologists Dr. Amy Margaris of Oberlin College and Dr. Joshua Reuther of the University of Alaska, for their input and review. Their observations provided ideas for future improvements.

Finally, we recognize that Alutiiq technology is an enormous subject and that this manual has much room for expansion and refinement. We consider this document a beginning, a draft to start the process of better documenting the tools and materials created by Alutiiq ancestors. We look forward to improving the inventory as research continues.
